JavaScript + React Project

Alyssa Kelley

My goal for creating this webpage was to become more familiar using JavaScript with React to create a website that has simular functionality as CBT Nuggets. I understand that CBT focuses on those technologies, and even though I do not have prior experience with them, I wanted to demonstrate my excitement to learn more.

On the left side of the page, there is an embedded youtube player showing CBT Nuggets' introduction video, and I did this using react-youtube which is a React component acting as a layer over the Youtube IFrame Player API. I wanted to make sure I included a video on my website since that is the main functionality of CBT Nuggets' training platform.

Towards the right of the video is the quiz portion of the webpage. Another big perk of CBT Nuggets' training modules is the quizzes that are offered along with the videos. I created this quiz section to only display one question at a time, but it will randomly generate a new question after you select your answer.

Below is a screenshot of my webpage and the link to it's GitHub repository:
